DETAILED ACTION

Response to Amendment

The present Office action is made in response to Amendment filed on 07/22/04. It is noted that the present application contains claims 1-3, 8-13, 18-21, 26-31, 36, and 246-274 and claims 4-7, 14-17, 22-25, 32-35, and 37-245 by the Amendment filed on 7/22/04.

Allowable Subject Matter

Claims 1-3, 8-13, 18-21, 26-31, 36, and 246-274 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

As independent to claim 1, the prior art of record, taken alone or in combination, fails discloses or render obvious a method of determining spacing between a patterned template and a substrate comprising all the specific elements with the specific combination including of determining a spacing between the surface of the patterned or planar template and the substrate based on measuring dimensions of the region by ascertaining a wavemunber associated with monitoring light that a function of a wavelength of the monitoring light and the index of refraction in combination with rest of the limitation of independent claim 1.

As independent to claim 19, the prior art of record, taken alone or in combination, fails discloses or render obvious a method of determining spacing between a patterned template and a substrate comprising all the specific elements with the specific combination including of determining a spacing between the surface of the patterned or

planar template and the substrate based the monitored light by obtaining data representative of optical properties of the monitored light with the magnitude being a function of optical characteristics of the material and a wavelength of the monitored light in combination with rest of the limitation of independent claim 19.

As independent claim 246, the prior art of record, taken alone or in combination, fails discloses or render obvious a method of determining a spacing between a template and a substrate with a material being disposed between the template and the substrate comprising all the specific elements with the specific combination including of determining a magnitude of the spacing between the template and the substrate based on the monitored light by obtaining data representative of the intensity of at least some of the wavelength associated with the monitored light and determining a wavenumber associated therewith, wherein the wavenumber is a function of index of the refractive and the wavelength of the monitored light with the magnitude being a function of wavenumber in combination with the rest of the limitation of claim 246.
